

Multi-Tissue Integration of Serum Metabolomics and Transcriptomics in Pig Protein Deposition (DLY vs TFB)

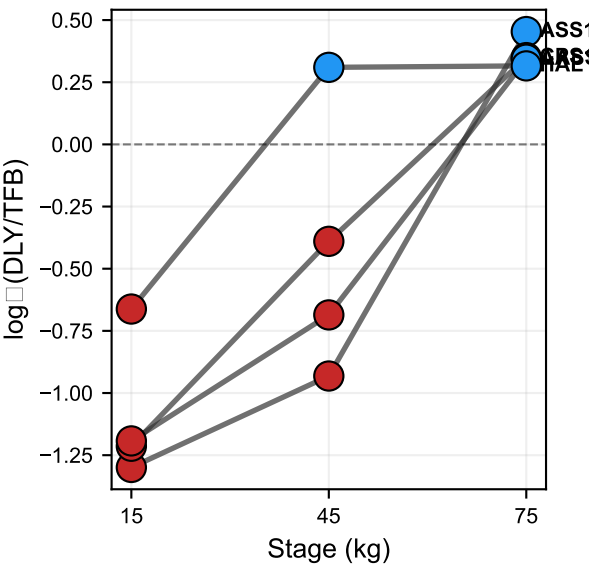

A Liver AA Catabolism Enzymes
log(DLY/TFB), 15–75 kg only

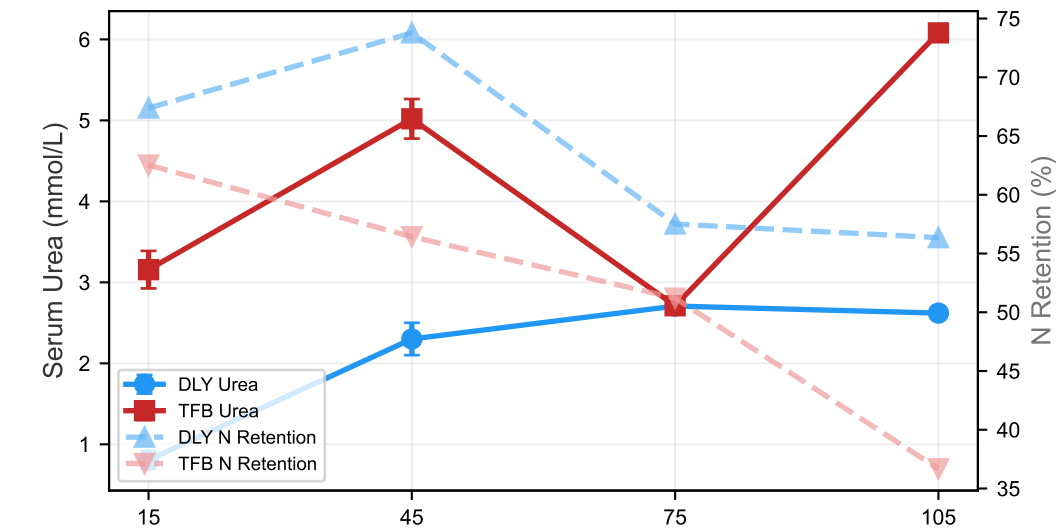

B STAT3 & Top Targets

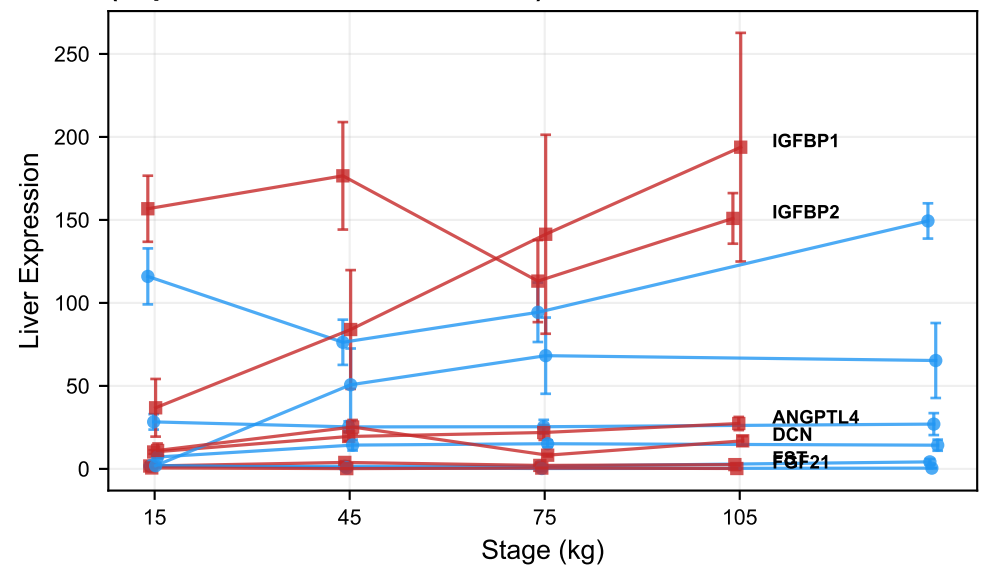

C 75 kg Direction Flip
(TFB↑ → DLY↑)

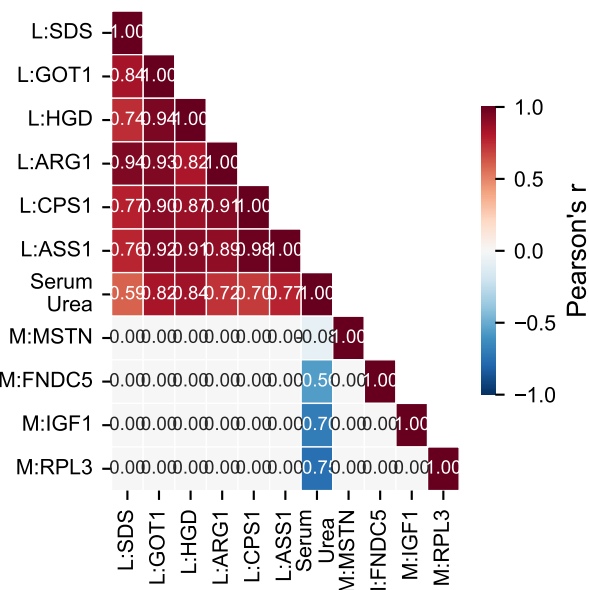

D Serum Urea & N Retention

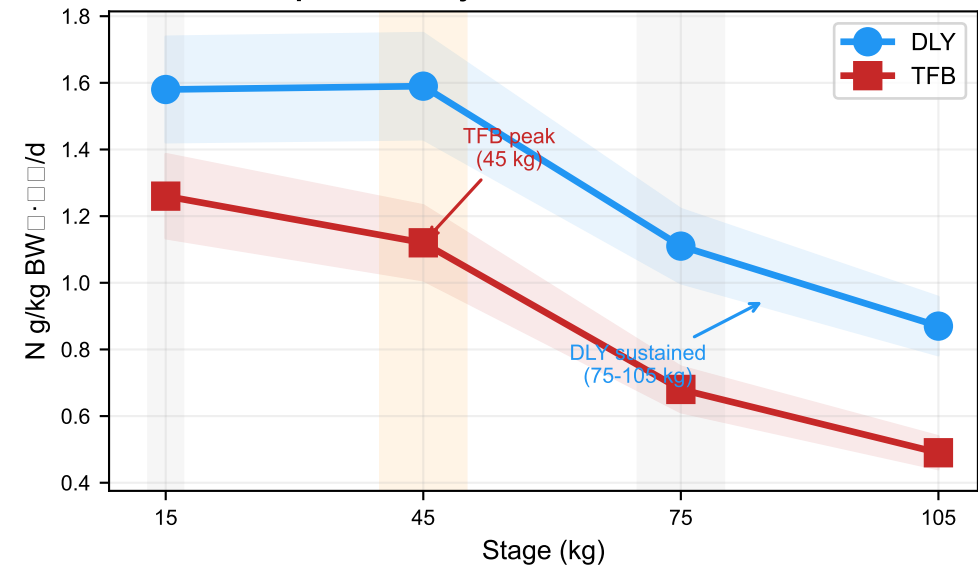

E Liver Crosstalk Genes
(hepatokines, nutrient sensors)

F Cross-Tissue
Correlation Matrix

G Protein Deposition Trajectories

H Integrated Causal Model: Liver–Serum–Muscle Axis
