

Muscle Protein Turnover: Synthesis vs Degradation Balance
DLY: Higher ribosomal expression + lower proteolysis → Efficient protein deposition

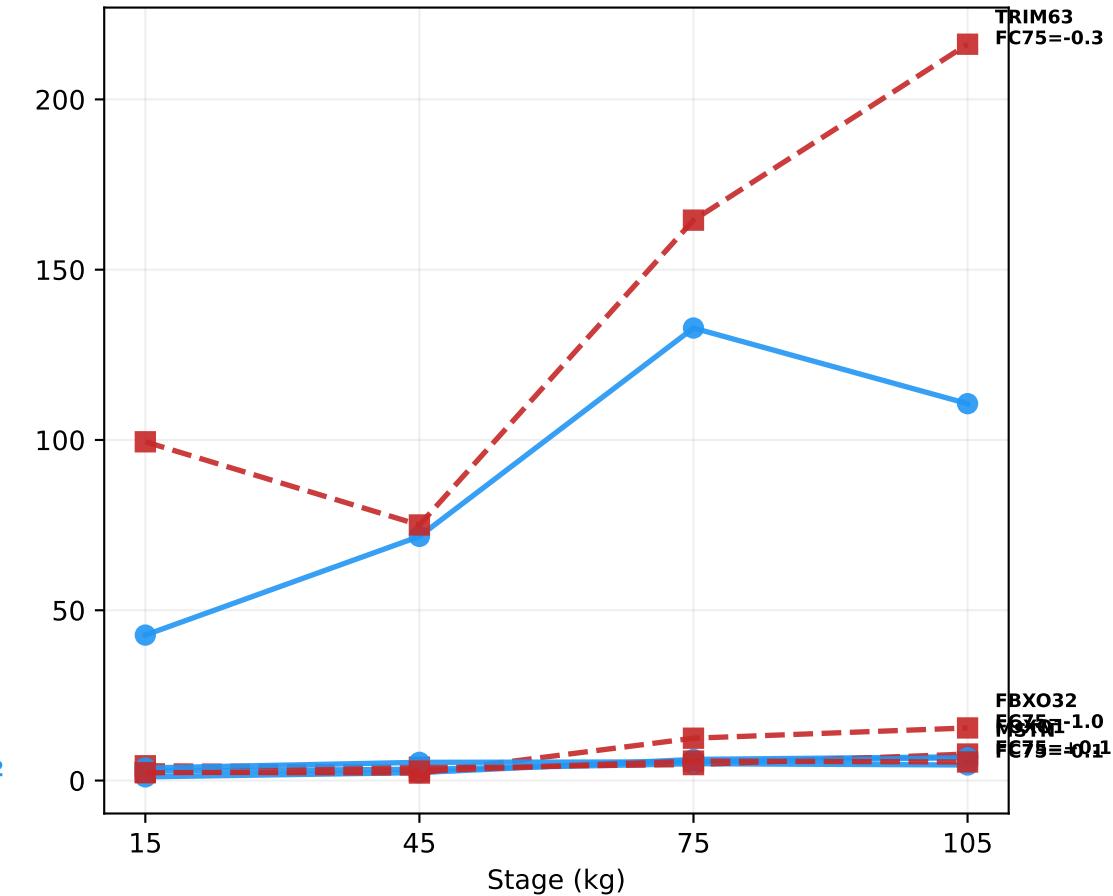

A Cytosolic Ribosomal Proteins
(Tier 1, DLY↑)

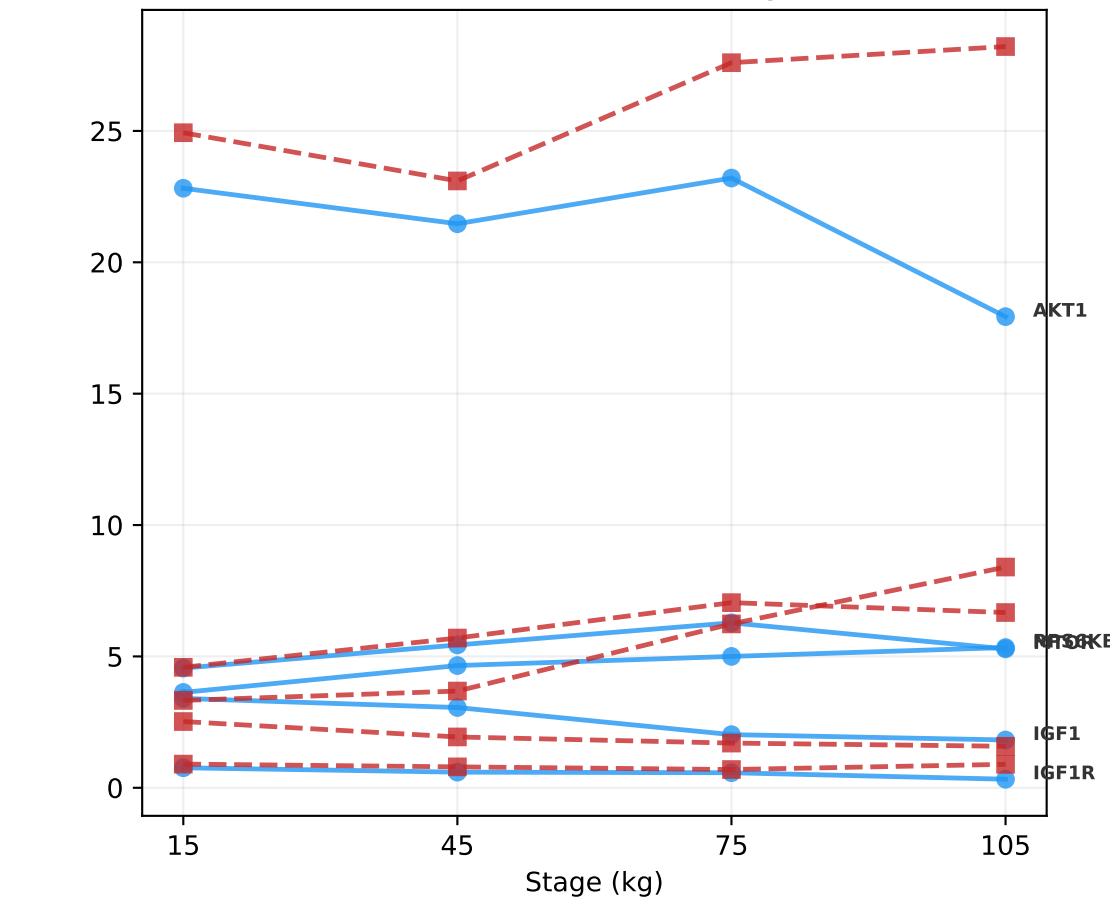

B Translation Initiation/Elongation
(Tier 1, DLY↑)

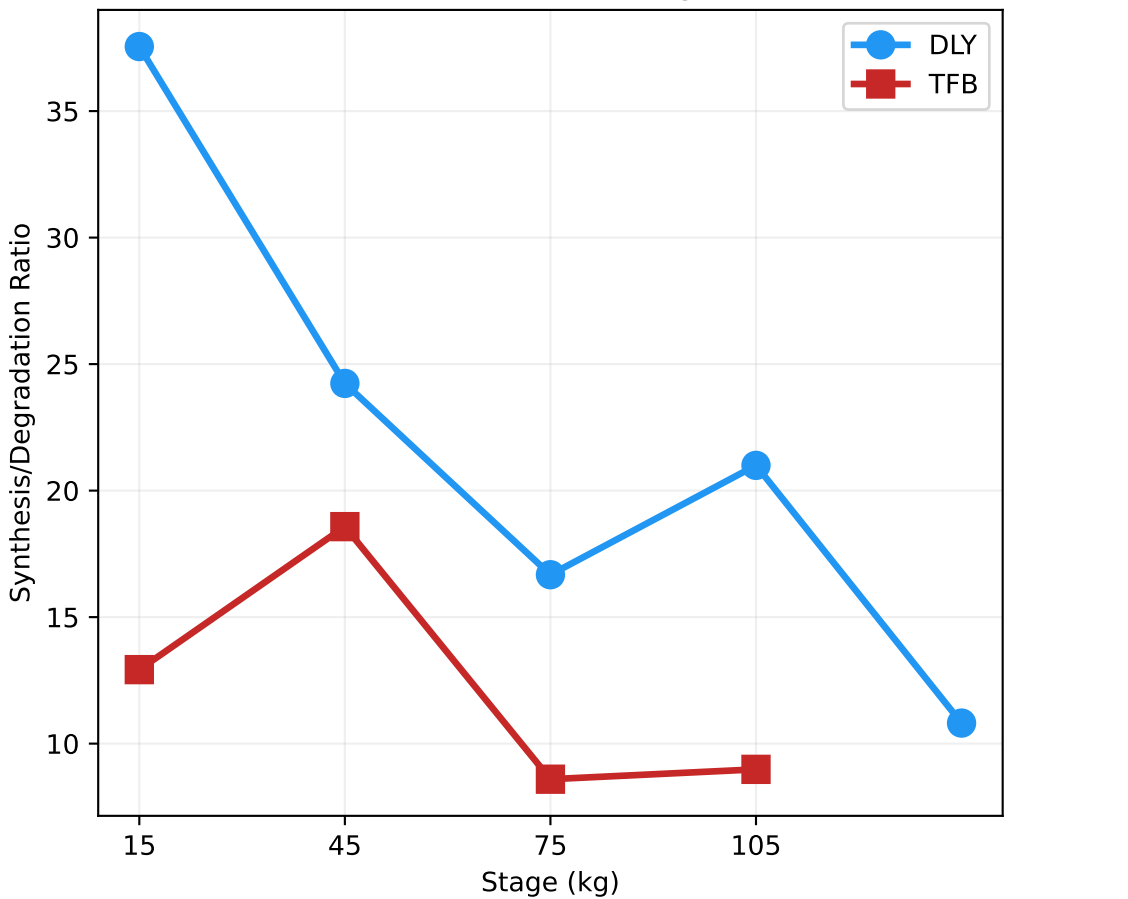

C Proteolysis (UPP & Autophagy)

D IGF1/mTOR Pathway

E Protein Synthesis / Degradation Ratio
(Ribosomal mean / Proteolysis mean)

F Synthesis/Degradation Ratio vs Protein Deposition (r=+0.781)
